

MODEL 4036Q & 4036

LIQUI-VAC HIGH VACUUM SEALANT

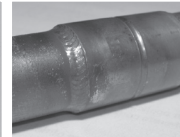

A TIME AND TEMPER SAVER IN AIR CONDITIONING AND REFRIGERATION SERVICE! This is the only liquid sealant that has all of the characteristics required for sealing a high vacuum joint. Just brush a thin coat of Airserco “Liqui-Vac” Sealant on all high vacuum connections. It stops high vacuum leaks around threads, through flared couplings, wherever metal joins metal. It sets up quickly but does not become hard. Connections can be taken apart easily. Supplied in a handy 4 ounce can (with brush in cap) for instant use, or in 1 quart cans for higher volume requirements.

Threaded

Machined Face

Welded/Soldered

FEATURES

- Brush-in cap
- Extremely low vapor pressure (less than 1 micron)
- No outgassing
- Quick set up
- Remains plastic
- Clean
- Convenient
- Transparent
